

Accessories Information Page

Resistant Building Products Ltd is a leading supplier of Magnesium Oxide Building Boards for a wide range of intended applications. Although we do not supply accessories we have undertaken extensive inhouse testing with a wide range of products useful for fixing our range of boards.

Grip & Grab Adhesive

Resistant always specify in our fitting guides that for best results all boards should be mechanically fixed back to substrates and never dot and dabbed. To achieve a temporary fix or to further strengthen a mechanical fix CT1 (commonly stocked in Builders Merchants UK wide) has proven during in house testing to work well with our boards when fixed to a variety of surfaces including timber, block & brick.

Weather Tight Construction Tape

To assist weather tightness of the temporary external envelope during construction phase and to help achieve air tightness targets of the finished building it may be beneficial to tape over all fitting joints.

Resistant have tested the adhesion of ISO-Top Flex-Tape in all weather conditions over a prolonged period of time and can testify for the strong adhesion to all boards in the Resistant range. ISO Chemie products are available on a next day delivery to site from their UK office in Co Durham.
